

PRESS RELEASE
2020 september 21st

Roboticom and Proteor are enthusiastic to announce their collaboration agreement for jointly promoting their own solutions in the **O&P market**. Roboticom is well-known for **ORTIS**, the original and most installed 7-axis robotic carver, while Proteor is expanding its presence in the field with its complete and innovative **ORTEN** solution, specifically developed for CPOs.

«We were looking for a reliable robotic carver to include in our portfolio» stated Frederic Desprez, Proteor Sales Director, «and **ORTIS is the best solution we could have!** We are glad to offer to our worldwide clients the best solution in orthopedics today: the best rectification software with **ORTENSHAPE** and the best 7-axis robot with **ORTIS**.»

«This agreement with Proteor will allow Roboticom to reach customers who don't have any experience with CAD/CAM systems and who are looking for a **complete hardware & software solution** for designing and producing their models» added Raffaele D'Achille, **ORTIS** Sales Manager. «The experience of Roboticom and Proteor in the orthopedic field is the basis for a reliable and successful partnership».

With this partnership, Proteor will complete the existing range of **3 milling machines ORTENMAKE**.

Besides, **ORTIS** still remains fully compatible with any CAD software on the market, an advantage for those customers who want to replace their old carver with a robotic system without changing their software too.

The collaboration between Proteor and Roboticom is operative in Europe and Asia and will be extended, in the future, to other continents.”
